A Hero's Light

- Hero's Light fundraising package includes 132 energy efficient, ENERGY STAR® qualified 14 watt CFL's
- Proceeds go to the Northern Ohio USO
- TCP's goal is to raise \$25,000 in the sale of the care packages for the USO. Currently, TCP is 40% to our goal.
- TCP also became official drop zone for care packages being sent overseas for our troops

Make your mark
with **ENERGY STAR® CFLs**

- ★ **Save Money:**
Switch to CFLs and you'll save up to \$25 in energy costs over the life of each bulb.
- ★ **Reduce Waste:**
CFLs last up to 10 times longer than incandescent bulbs so they reduce solid waste.
- ★ **Save Energy:**
CFLs use 75% less energy than standard incandescent bulbs.

(UTILITY) has partnered with lighting manufacturers to provide discounted pricing on CFLs.

Learn more at MakeYourMarkTX.com

Did you know?

- Take the first step in saving energy - replace your home's 5 highest-use light bulbs with CFLs: the kitchen ceiling light, the living room table and floor lamps, the bathroom vanity and the outdoor porch light, or lamp post.
- If every American home replaced 5 high-use bulbs with ENERGY STAR CFLs, the annual savings would equal the output of 21 power plants.
- In just 15 days, incandescent bulbs waste more money than you paid for the bulb in the first place.

UTILITY LOGO

Recycling your CFL bulb

CFLs should be recycled through your local household hazardous waste facility, since they contain trace amounts of mercury. When handled safely, these bulbs pose no threat and are a great benefit since they can greatly impact our region's energy use.

Typical amount of mercury found in a white-watch battery versus a CFL bulb:

WATCH	CFL
31mg	5mg

CHANGES FOR THE BETTER WITH ENERGY STAR

Did you know...

If every household in Nevada replaced just one incandescent bulb with a CFL, we would:

- Save over \$23 million in energy costs
- Prevent 250,000 tons of carbon dioxide emissions, which is like taking 46,000 cars off the road
- Save enough energy to power 29,000 homes for one year

Put your energy to better use.

Compared to incandescent bulbs, ENERGY STAR qualified compact fluorescent light (CFL) bulbs:

- last longer
- use less energy
- protect our future

Buy Bulbs Here!

Look for discounted prices on a variety of CFLs, courtesy of Sierra Pacific Power Company.

Small things make a difference.

Change out frequently-used bulbs with CFLs!

- Suitable for all areas
- Suitable for recessed can lights
- Good choice for bathroom vanities
- A more aesthetically pleasing bulb for all areas

Sierra Pacific
More power to you.

ENERGY STAR

1. For more information on CFLs, visit www.energystar.gov or call 1-877-ENERGYSTAR.

CFL & Mercury: The Facts

Compact fluorescent light bulbs (CFLs) contain a small amount of mercury, which is about 100 times more efficient than incandescent bulbs. Mercury is found naturally in the air, soil and water. CFLs have the least amount of mercury in a household – an average of 4 mg, which is about the size of the period at the end of this sentence.

It's important to "close the loop," protect the environment and recycle your CFLs.

Recycling Your CFL

1. Locate a household waste facility. Visit www.wasteinfo.org or www.wasteinfo.org for more information, such as The Home Depot, also accept used bulbs for recycling.
2. Designate a "collection box" in your home for CFLs and other products that contain mercury.
3. Keep the CFL inert for recycling.

If Your CFL Breaks

Be careful when you break your CFL. Mercury is not to be absorbed! The EPA does recommend simple steps to clean up broken CFLs:

1. Before you break a CFL, turn off the lights.
2. Do not touch the broken CFL. Do not breathe in the powder.
3. Pick up the broken CFL with a piece of paper.
4. The CFL is now broken. Do not touch it.

How Much Mercury is in a CFL?

- Mercury is found naturally in the air, soil and water.
- CFLs have the least amount of mercury in a household – an average of 4 mg, which is about the size of the period at the end of this sentence.
- CFLs have the least amount of mercury in a household – an average of 4 mg, which is about the size of the period at the end of this sentence.
- CFLs have the least amount of mercury in a household – an average of 4 mg, which is about the size of the period at the end of this sentence.
- CFLs have the least amount of mercury in a household – an average of 4 mg, which is about the size of the period at the end of this sentence.
- CFLs have the least amount of mercury in a household – an average of 4 mg, which is about the size of the period at the end of this sentence.

Put Your Energy to Better Use

Compared to incandescent bulbs, ENERGY STAR qualified compact fluorescent light (CFL) bulbs:

- last longer
- use less energy
- protect our future
